##### *The challenges of reviewing science in the XXI century*

Los retos de revisar la ciencia en el siglo XXI

(PCoI04)

*Systematic reviews are critical for advancing knowledge from what is currently known and practiced. However, methods of reviewing are constantly evolving. There is a requirement to improve our understanding as methods develop and also to consider and explore alternative sources of evidence. Are we ready for reviewing the science of the XXI century?*

Las revisiones sistemáticas son fundamentales para avanzar en el conocimiento de lo que actualmente se conoce y se practica. Sin embargo, los métodos de revisión están en constante evolución. Debemos mejorar nuestra comprensión de los métodos en desarrollo y también estudiar y explorar fuentes alternativas de evidencias. ¿Estamos listos para revisar la ciencia en el siglo XXI?

### *Designing a sustainable evidence-based health care in times of crisis*

Diseño de una atención sanitaria sostenible y basada en la evidencia en tiempos de crisis

(PCol05)

*There is a continuous threat of social crises, economic downturns, or natural disasters. Any talk about the future seems to lead to the ongoing concerns for health systems in the world. Are we ready to deal with this perspective of crisis more or less permanent? Is research designed and prepared to survive in health care systems in crisis? Different perspectives from economists to politicians and researchers will provide some insight into how evidence could be obtained and used to help sustain a health care system in a crisis context.*

Existe una amenaza constante de crisis sociales, económicas o desastres naturales. Cualquier conversación sobre el futuro parece mediatizada por las preocupaciones que persisten para los sistemas de salud de todo el mundo. ¿Estamos preparados para hacer frente a esta perspectiva de crisis más o menos permanente? ¿Está diseñada la investigación para sobrevivir en unos sistemas de salud en crisis? Diferentes perspectivas, desde las de los economistas a los políticos e investigadores, apuntarán cómo podría obtenerse y usarse la evidencia para ayudar a hacer sostenible el sistema de salud en un contexto de crisis.
